

AI INTERVIEW PREPARATION APP

By P09

SYSTEM ARCHITECTURE

Gateway (Top Left):

This is the system’s entry point for all external clients. It handles initial requests, authentication, and routing requests to the appropriate internal services.

EventBus (Top Center):

The central nervous system for asynchronous communication. Services send and receive messages/events through the EventBus.,

Microservices (Center):

The core business logic of the application. These are small, independent services (like Provision Service, Scoring Service, etc.).

Storage (Top Right):

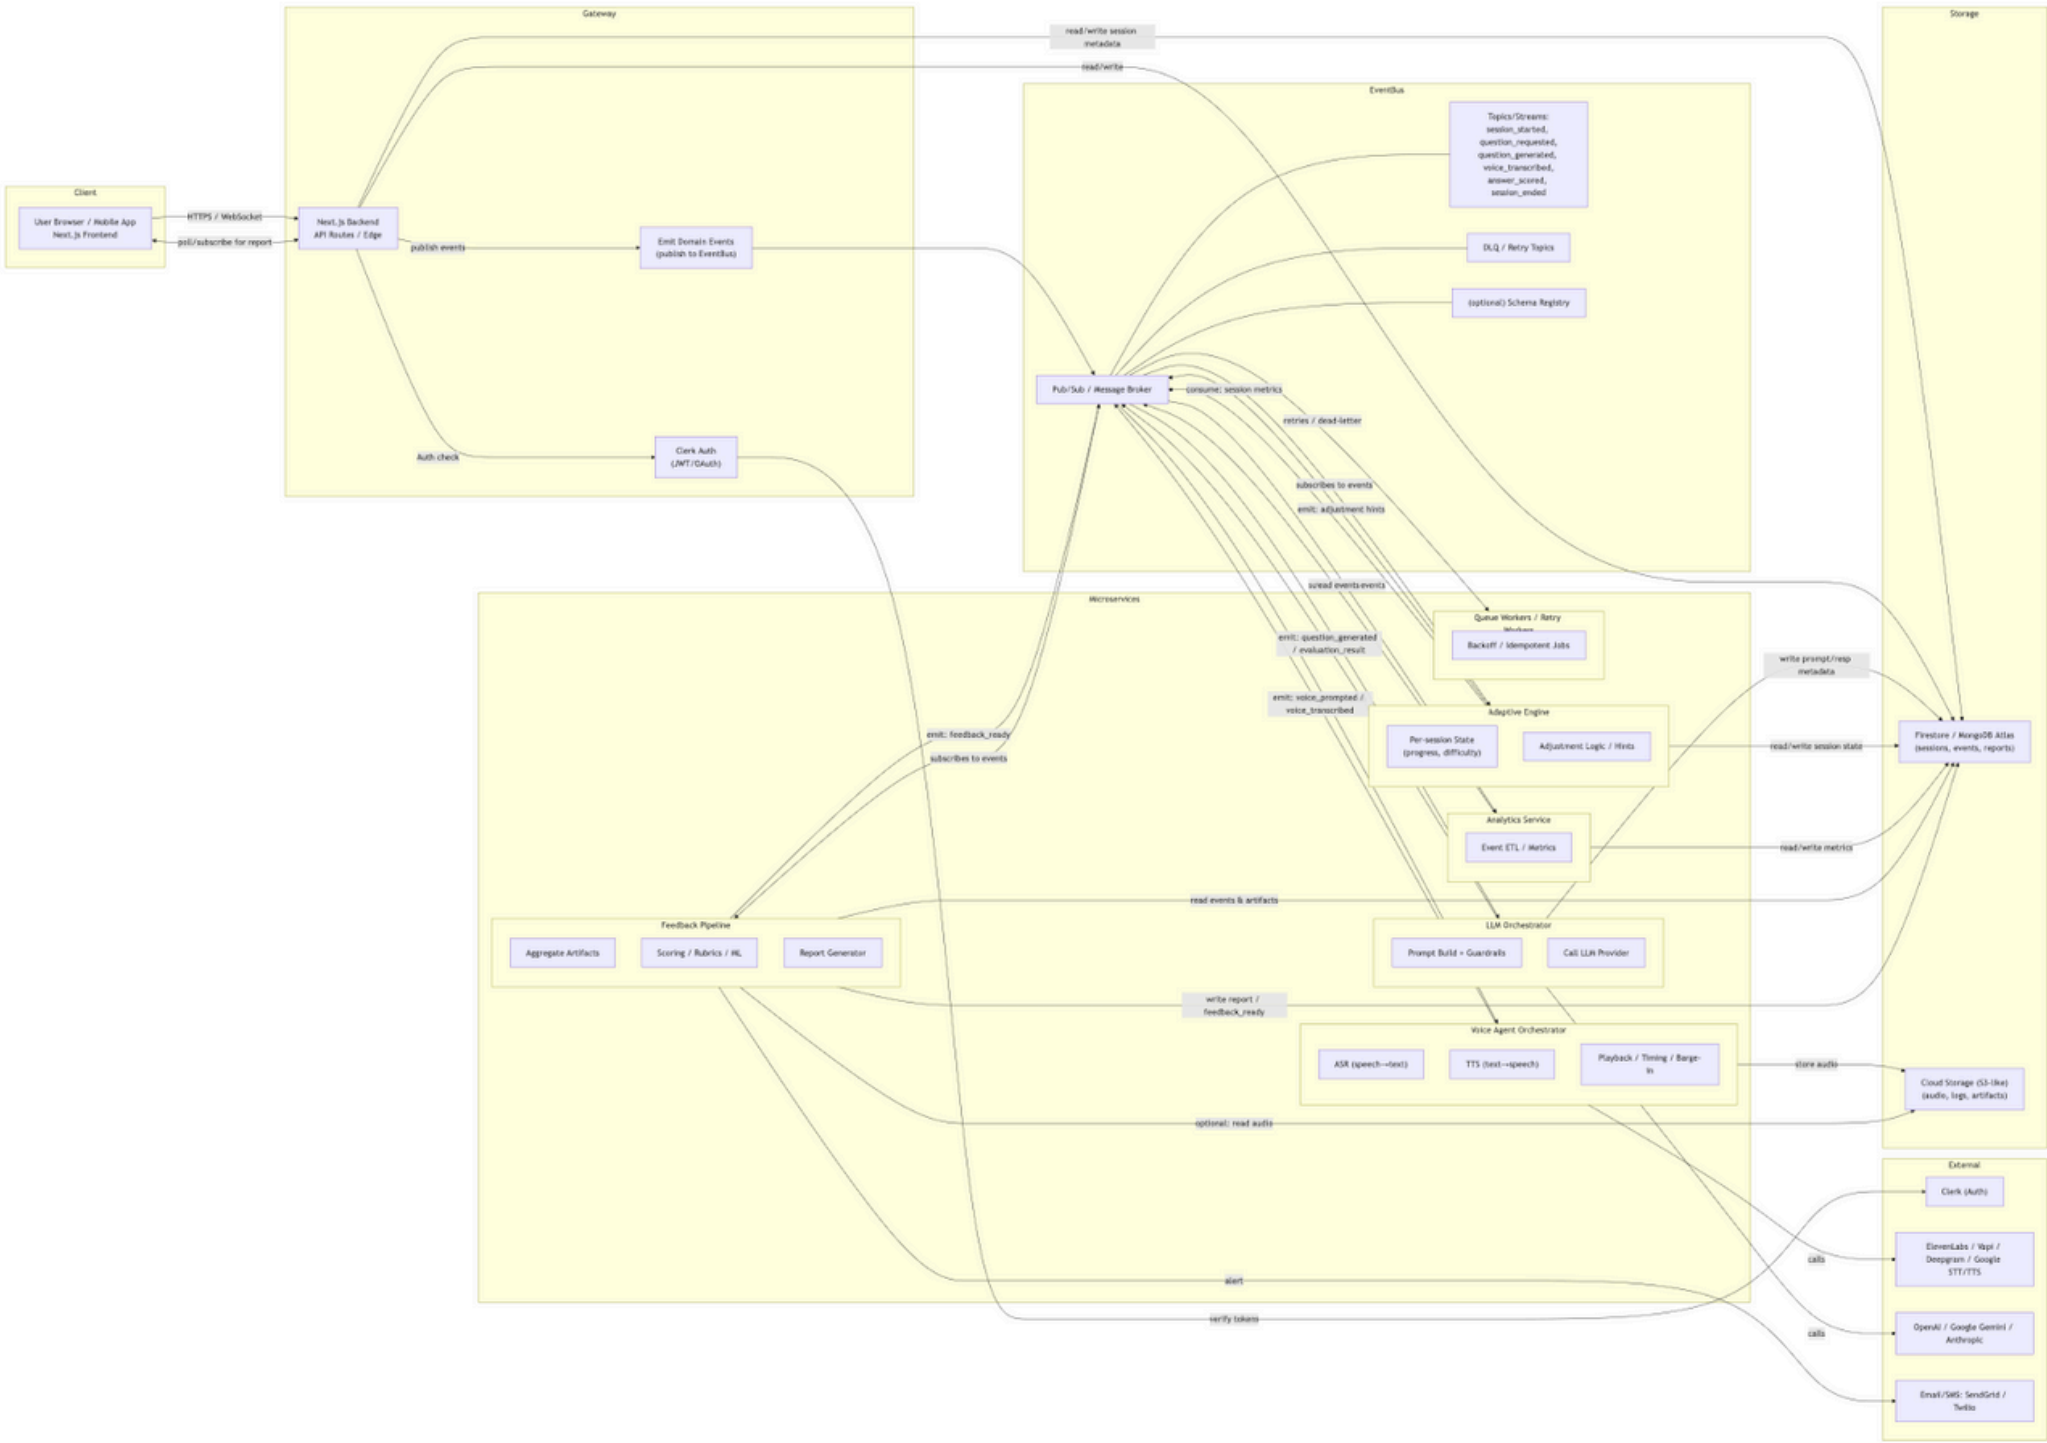

Represents various database and persistent storage solutions, including time-series, analytics, and standard data storage.

External (Bottom Right):

Services outside the core system, such as email/SMS providers, general storage, and other third-party APIs (e.g., Email/SMS, Google Storage/S3).

Feedback/Metrics (Bottom Left):

Dedicated services for aggregating, scoring, and generating reports from system data and user feedback.
